Buy any Avantor[®] ACE[®] Column and get a bottle of VWR Chemicals BDH[®] HPLC Solvent free!

AVANTOR[®] ACE[®] COLUMNS

Provide great reproducibility and column lifetime. These columns are available in a wide range of particle sizes and dimensions – from capillary to preparative – and are designed for a wide range of chromatographic applications, offering great performance with acidic, basic and neutral molecules.

- Ultra-high purity, base-deactivated silica with exceptional reproducibility
- Ideal for a wide range of analytes differing in hydrophobicity
- Wide range of particle sizes (2 to 10 µm) and complementary phases

Additionally, columns are made with high-quality stainless steel for U-HPLC applications and a long lifetime.

CELL CULTURE

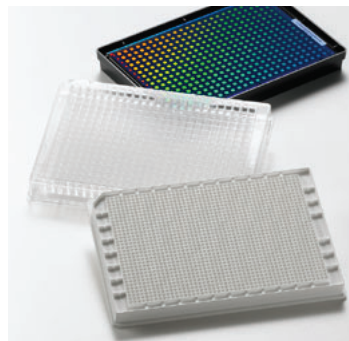

Corning® vessels, surfaces, and media solutions optimize your cell environment to boost yield, reduce variability, and increase your chances for success.

BIOPROCESS

From cell line development and process development to GMP manufacturing, our vessels provide the necessary platform to help you scale up to accomplish your goals.

DRUG DISCOVERY

Corning provides beginning-to-end solutions for cell-based and biochemical assay development, high throughput screening, automation, and label-free technology.

LIQUID HANDLING

Falcon® products are reliable leaders in liquid handling and an essential part of the Corning portfolio.

GENOMICS

Axygen® products set new standards in sample handling, delivery, and storage—offering a complete range of disposable tips, PCR storage products, and benchtop equipment.

CHEMISTRY/EQUIPMENT

Since 1915, PYREX® glassware has become the accepted standard in chemistry labs across the globe. Enhance workflow efficiency and advance your research discoveries using high-performance, dependable equipment with the complementary Corning brands you know and trust.

MICROBIOLOGY

With a full range of products—from sampling to inoculation to disposal—Corning provides beginning-to-end solutions for microbiology and quality testing labs.

	89236-112	PCR-0108-LP-C	Axygen 0.1 mL thin wall clear PCR 8-strip tubes, low profile Polypropylene	125	1,250
	47745-512	PCR-2CP-RT-C	Axygen Ultra-clear PCR 8-strip flat caps (fits 0.2 mL PCR strip tubes)	125	1,250
	10011-760	PCR-0208-A	Axygen 0.2 mL Polypropylene PCR 8-strip tubes, assorted colors	125	1,250
	76102-482	PCR-0208-AF-C	Axygen 0.2 mL clear Polypropylene PCR 8-strip tubes with attached flat caps	126	1,260
	76102-484	PCR-0208-AD-C	Axygen 0.2 mL clear Polypropylene PCR 8-strips tubes with attached dome caps	126	1,260
	10169-890	PCR-05-C-500	Axygen 0.5 mL thin wall clear PCR tubes with flat caps	250	500

PCR Microplates

	47749-876	PCR-96-AB-C	Axygen 96-well clear elevated skirt PCR microplate, (compatible with ABI)	10	50
	10011-228	PCR-96-FS-C	Axygen 96-well clear full skirt PCR microplate	10	50
	47743-953	PCR-96M2-HS-C	Axygen 96-well clear half skirt PCR amplification plate with a single notch corner	10	50
	47745-438	PCR-96-SG-C	Axygen 96-well clear PCR plate, segmented	10	50
	47744-810	PCR-384M2-C	Axygen 384-well clear PCR microplate (compatible with ABI 3730 and 3100)	10	50

PCR Microplates for 0.2 mL Thermal Cycler Blocks

	89005-554	PCR-96-LP-AB-C	Axygen 96-well clear low profile PCR microplate, half skirt (compatible with ABI FAST cyclers)	25	100
	89005-550	PCR-96-FLT-C	Axygen 96-well clear, flat top PCR microplate, no skirt (compatible with BioRad/MJ Research PTC-100, PTC-200, PTC-225)	25	100
	89005-552	PCR-96-LP-FLT-C	Axygen 96-well clear low profile, flat top PCR microplate (compatible with Eppendorf MasterCycler SX1/nexus GSX1e/nexus SX1e)	25	100
	89006-880	PCR-96-LP-FLT-W	Axygen 96-well white low profile, flat top PCR microplate, no skirt (compatible with MJ Research PTC-100, PTC-200, PTC-225)	25	100
	89130-568	PCR-96-LC480-W	Axygen 96-well PCR microplate, white, with sealing film (compatible with Roche 480 LightCycler®)	10	50
	89131-748	PCR-384-LC480-W	Axygen 384-well PCR microplate, white, with sealing film (compatible with Roche 480 LightCycler)	10	50

PCR Sealing Mats

	47734-817	PCR-AS-200	Axygen Aluminum sealing film for thermal sealing and general sealing purposes, pierceable	100	500
	10011-117	PCR-SP	Axygen AxySeal sealing film for tissue culture, short-term storage, and transportation	100	500
	10011-121	PCR-TS	Axygen CyclerSeal sealing film for storage and PCR applications	100	500

Six Key Features of Our Cell Culture Solution

Integrated H₂O₂ decontamination is fast, efficient, safe and scientifically proven.

- Interior components are reduced approximately 80%. Only 5 parts to simplify cleaning.
- Preparation time is from 10 to 15 minutes. Total start-to-finish time is 2.5 hours nominal.
- Decontamination cycle is approximately 135 minutes.
- Nebulized H₂O₂ is circulated by interior blower for 100% exposure.
- Kill rate achieves 100% with a 6 log reduction.
- H₂O₂ decomposes as hydroxyl radicals (2•OH) which destroy pathogens before reducing to water.
- Moisture wipe down and component replacement is less than 10 minutes.

SafeCell™ UV scrubs interior air of contaminants.

- Ten-minute ON cycle automatically activates after door open/close event to kill pathogens in the air and humidity pan water surface.
- UV light ON time automatically compensates for UV lamp life.

InCu-saFe® resist surface contamination.

- Copper enriched, stainless steel alloy offers germicidal properties of elemental copper without corrosion or discoloration.

Dual IR Sensor delivers precise CO₂ control.

- Proprietary IR2 sensor achieves ultrafast CO₂ recovery without overshoot, even following multiple door openings.

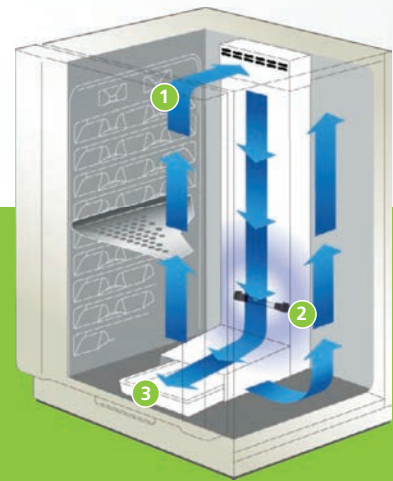

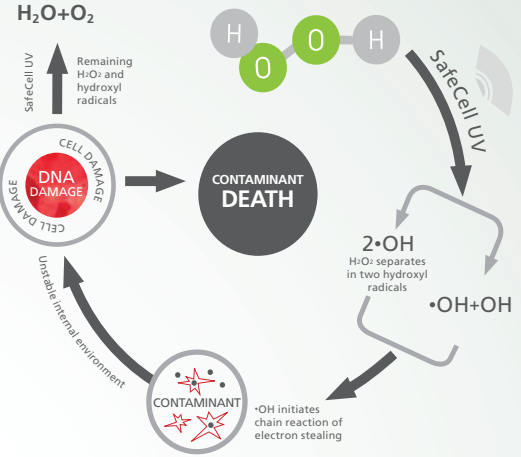

Exclusive interior condensation probe returns excess humidity to the reservoir.

- The Peltier powered dew stick located in the interior chamber draws condensation away from the inner door, outer door, and interior.
- Minimizes external factors that often complicate efforts to reproduce cell culture and other protocols.

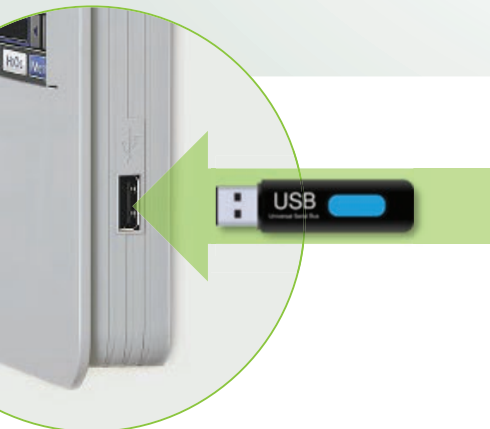

Air jacket heating method maintains top-to-bottom uniformity.

- The patented Direct Heat and Air Jacket system works with the IR2 sensor to provide precise temperature and CO₂ levels, respectively.

- 1 **Airflow Decontamination.** SafeCell UV lamp decontaminates conditioned air and humidity reservoir water surfaces to eliminate airborne distribution of pathogens.
- 2 **UV Lamp.** Long-life UV lamp has a service life of 5,000 hours, approximately 7.5 years. Lamp is easily removed and replaced.
- 3 **Humidity Pan.** Contaminants trapped on the water surface are destroyed by UV irradiation. Lamp is visually isolated from interior shelves to protect active cell cultures.

Data Acquisition Records Performance

- Standard USB port simplifies data capture and transfer to memory device.
- Internal security protects samples.
 - » Auto lock automatically secures interior chamber.
 - » User ID and password prevents unauthorized setpoint changes; restricts access.
 - » Central control panel controls password access.

Sartolab® Multistation

Hands-Free Parallel Filtration of up to Six Samples

The Multistation in combination with the 50 mL vacuum filtration units and the diatomaceous earth filter aid, is the perfect tool for customers wanting to process many small samples of mammalian cell cultures. The Sartoclear Dynamics® Lab V50 kits (containing filtration unit and diatomaceous earth) do not only eliminate the centrifugation step, but together with the Multistation facilitate the filtration avoiding extra time typically consumed for connection and stabilization.

One click and the filtration unit hangs in the device. That assures a perfect stability of the filter; with a second click the vacuum is automatically applied and the filtration begins.

The rotating head is multi-directional and enables easy handling of your samples in front of you. Furthermore, all 6 brackets are numbered to avoid any confusion during the filtration of multiple samples.

Purchase 3 cases, get 1 at no additional cost*

For a limited time, purchase 3 qualifying cases of Nalgene Rapid-Flow Filter Units or Bottle Top Filters and get 1 case at no additional cost*

Perform sterile filtration of cell culture media, serum, additives, and buffers with Thermo Scientific™ Nalgene™ Rapid-Flow™ Sterile Single-use Filter Units. These filters feature fast flow rates, high throughput for increased filtration efficiency, and the exclusive Rapid-Flow support plate design.

Choose from 2 membrane types:

- aPES membrane is ideal for cell culture media, serum and buffers and provides the last line of defense against contamination
 - 0.2µm units protect against bacterial contamination
 - 0.45µm units offers a more open pore size for clarification needs
 - 0.1µm units also protect against Mycoplasma contamination; manufactured in a zero-waste facility
- Nylon membrane is recommended for aggressive fluids like DMSO and alcohols, buffers, DI water, and other aqueous solutions where protein, peptide, and nucleic acid binding is not a concern. Nylon is a naturally hydrophilic membrane that does not contain wetting agents, thus reducing the potential for extractables and leachables while providing good chemical resistance.

MICROSCREEN HISTOLOGY CASSETTES

BUY 10 CASES AND GET 1 FREE!

The Microscreen Cassette is designed to handle small, fragile biopsy specimens. Sturdy nylon mesh improves fluid exchange by reducing surface tension of reagents. Fixation/preparation of tissue samples is accelerated, and the need for pads, sponges, and nylon or lens paper bags is eliminated.

- Eight 11mm slots in base and lid to help cassette sink rapidly
- Anterior writing area at 45° angle
- Hinge design configuration allows for multiple opening and closing
- Cassette frame made of acetal; resistant to histological solvents
- Reduces number of incidents involving non-fixed or insufficiently fixed tissues
- Inner chamber designed for greater biopsy protection
- Large front tab for easier lid opening

LIMITED-TIME PACKAGES

Optimizing uptime and minimizing downtime

Accuracy and consistency is absolutely vital in any scientific field, which is why you depend on the equipment and instruments in your laboratory to provide you reliable precision for all your research and production tasks. But how can you be sure that these tools are always giving you the best results? A faulty pipette can invalidate a day's work—even worse, a malfunctioning cold storage unit can ruin an entire year's worth of research!

Avantor Services reduces these concerns by providing validation, calibration, preventative maintenance, and extended warranties on all the equipment and instruments in and around the laboratory. Our specialized team can work both onsite and

through mail-in solutions, enabling you to improve efficiency by keeping your tools in compliance and making the most of your equipment investments. With our team of ISO 9001 / IEC17025 accredited service providers, Avantor Services can be your single point of contact for all equipment and instrument service needs.

Avantor Services can help manage the full life cycle of your equipment and instruments and more.

- Chemical management
- Constant temperature unit validation, calibration and installation
- Cold storage validation, calibration and installation
- Instrument calibration, installation and preventative maintenance
- Pipette calibration
- Fume hood and safety cabinet certification and validation
- Chromatography and mass spectroscopy equipment services

UHPLC/HPLC COLUMNS FOR REPRODUCIBLE OLIGONUCLEOTIDE ANALYSIS

- Proprietary encapsulated stationary phase for oligonucleotide analysis
- Ultra-inert silica and high efficiency 1.7 and 3 µm particle sizes for optimum peak shape
- Extended pH stability up to 11.5 with LC-MS compatible buffers
- Highly reproducible stationary phase: batch-to-batch and column-to-column
- Excellent column lifetime under oligonucleotide testing conditions

OLIGONUCLEOTIDE ANALYSIS

- Oligonucleotides are being synthesized for therapeutic usage against many diseases including genetic disorders and cancer
- Several impurities can be produced during oligonucleotide synthesis (e.g., failure sequences) which need to be separated from the desired product
- Ion-pair RPLC can be employed for the analysis of trityl-off deprotected oligonucleotides
- Triethylammonium acetate (TEAA) is used to ion pair with the negatively charged phosphodiester backbone of the oligonucleotide
- The stationary phase is chemically modified to withstand an extended pH range
